<p>Ozark Forest Forensics by Frederick Paillet and Steven Stephenson</p> <p><i>Ozark Forest Forensics</i> interprets our natural surroundings in a way that enhances a simple walk in the scenic deciduous woodlands of the Ozark Mountain region. Explanations go beyond trees and their habitat to include other diverse subjects: the leaf litter beneath a hiker's feet, strategies used by wildflowers for pollination and seed dispersal, diseases that can ravage our forests, and forces active in the landscape that impact conservation efforts. Simplified line drawings demonstrate specific points of interest in a way that visually cluttered photographs cannot do. Includes: 163 line drawings, a list of species used in the text, a glossary, and a reading list.</p>	24.95
